

Why should a Bar or Tavern consider investing in a POS System?

POS Systems used to be too expensive, too complicated, too slow and too unreliable.

Our System is fast, easy to use, durable as a tank and it's very affordable.

(As low as \$ 1.24 per station per day over a five-year period.)

At Performance POS we are all Restaurant and Bar Professionals and we have been helping small neighborhood bars and grills to make more money with our system. We can help you too, here are some of the ways we have increased sales and cut costs.

Get the right tax!

Many bars use even amounts for fast cash transactions. We get it. That makes sense.

More and more transactions these days are tabs, or run with credit cards and in those transactions our system will automatically add the tax to everything on the bill and the bartender does not have to touch anything it's automatic. This will increase that sale by up to 9.5% and will, in time, pay for the entire POS system all by itself.

Correct Prices

A POS System will accurately charge your customers the current price for your menu items. Sometimes we find that bartenders make a mistake on price. We have installed hundreds of systems in Bay Area bars and we often find different prices are being charged for the same drink, we can help you, make the right margin all the time.

Itemize those drinks!

There are more than five different prices from your vendor for your liquors. Well, Call, Premium, Super Premium and Extra don't make you the best margin, but finding all those drinks on an older cash register is too slow and would hurt your business, with our easy to use touchscreen system we have helped our customers get the right price for every item, every time.

Happy Hour Prices

Happy Hours can increase your customer base and bring in more money so having the system remember to turn it on an off will help you increase your bottom line.

Faster rings

One common misconception is that cash registers are faster, back in the day that was true, but not anymore. Our system can accommodate up to 99 buttons on just one screen alone. It's fast to find the right item now.

Close checks faster

A bartender can find and close a cash tab in seconds. This makes a huge difference but especially at closing time when there is often a large number of parties leaving at the same time. You can be assured that even with a crowd your staff will quickly close the correct customer and to the correct amount.

Accurate tips.

With integrated High-Speed Credit Card Authorization integrated to your POS System there is no need to do double duty and the credit cards will always match the actual receipt. Bartenders are always prompted to add all their tips before they can check out at the end of the shift; this ensures that you don't over pay for uncollected tips.

Get Employees on the clock, and then get them off the clock!

You can schedule staff at the time you want them in; our integrated payroll gives you the information you need to adjust your staff. The Bartender report gets them off the clock about 20 minutes faster than when they need to run reports off an old fashion cash register. Think how much payroll money 20 minutes per employee per shift adds up to every year.
